

We need to build a ticketing system for the local baseball team, the Johnstown Millrats, so they can sell tickets and manage capacities for their 28 home games. Last season, they sold tickets through the website and are continuing to do so that way. They also sell physical tickets at the entrance of the stadium before games only.

It's estimated to take 12 months to produce all deliverables. Think about MVP in creating the Product Roadmap for this Information System, so that we can do a release to begin selling tickets as soon as possible. However, the client's vision of the MVP doesn't want to lose any existing functionality that they currently have when they switch to our ticketing system.

Key dates to keep in mind:

- We're starting today in February, so it's a tight timeline
- May 1st - absolute last day that we can start selling tickets through the web app
- May 27th - 1st Home Game

Deliverables:

- Wireframes & Mockups - for each platform below will be delivered to the client prior to development of that platform
- Target Platforms:
 - Fan Mobile app..... we'll treat Android and iOS apps as 1 deliverable to support both platforms
 - Fan Web app
 - Staff Web app
 - Staff Android App (only Android because we control the devices used to scan tickets)

Desired Features:

- Fan Mobile (iOS/Android) app
 - Password less Login - users will enter this phone number or email and receive a verification code to enter
 - Ability to receive Push Notifications
 - Guest Checkout Ordering (so, user doesn't have to sign in) ... user will minimally have to enter phone number or email to complete checkout
 - Account Checkout Ordering (so, user was logged in)
 - Ability to Share a single game ticket to another person via phone number
 - QR Code Entry by showing from device for scanning for event entrance
 - Ability to Print Tickets
 - Ability to Order Season Tickets
 - Ability to Order Individual Game tickets
 - Ability to Purchase Concessions (food items from 1 concession stand that they have) do not worry about how the Concessions stand receives these orders
 - QR Code Concessions Pickup by showing from device for ordered items

- Fan Web app
 - Password less Login - users will enter this phone number or email and receive a verification code to enter
 - Guest Checkout Ordering (so, user doesn't have to sign in) ... user will minimally have to enter phone number or email to complete checkout
 - Account Checkout Ordering (so, user was logged in)
 - Ability to Print Tickets
 - Ability to Share a single game ticket to another person via phone number
 - Ability to Order Season Tickets
 - Ability to Order Individual Game tickets
- Staff Web app
 - Ability to manage my Account Management (login, send invites to users)
 - Ability to Manage Events, for the game schedule create, edit, delete actions
 - Ability to Manage Ticket types available for purchase (3 options)
 - Season Ticket, Individual Game - General Admission Ticket and Individual Game-Premium Seat Ticket
 - Ability to Mark a single ticket was Sold at front gate - allows systems to reduce the number of tickets available
 - Concessions Product Management - manage the items listed for sale and prices
 - Ability to Print a single game ticket
 - Be able to Initiate Single Game Refunds (for cancellations or rainouts)
 - Ability to Send Push Notifications to Fans
- Staff Android App
 - Ability to Send Push Notifications to Fans
 - QR Scanning of tickets (paper tickets or shown on the phone) upon entrance
 - Ability to Scan QR Code Receipt from a Fan's Concession Order,

Given Guardrails:

- Minimum of 2 versions for each Deliverable platform over the course of the project
- 3-4 Release Dates shall be in your roadmap
 - You must give your team at least 2 months from the start of the project before any software release
 - Deliverables take at least 3-4 weeks of work before they are ready to be released
 - Must have Only 1 pre-production deliverable release for any 1 deliverable platform of your choosing in the roadmap
 - There should be only 1 Mid-Season Release (Season Runs from May 28th to July 30th)
 - At least 2 Deliverable platforms will be part of this mid-season release
