

IT Disaster Recovery Plan (ITDR)

University of Pittsburgh at Johnstown

Prepared by: Shi Hao Guo

Course: 2264 IS 1445 SEC4010

Instructor: Prof. Robinson Ocampo

Date: April 1st, 2026

Plan Governance & Lifecycle

Plan Ownership

The IT Disaster Recovery Plan is owned and maintained by the IT Director, and it is the responsibility of the IT Director to ensure that the IT Disaster Recovery Plan is valid, updated, and relevant to the organizational infrastructure.

Maintenance Schedule

This plan will be reviewed:

- Annually
- After any major infrastructure or system changes
- After any disaster recovery event

Change Control

All changes to the ITDR plan must:

- Be documented and approved by IT management
- Reflect updates in hardware, software, or network configurations
- Be communicated to all relevant stakeholders

Testing Requirement Schedule

The ITDR plan will be tested annually using:

- Tabletop exercises
- Full disaster recovery simulations
- Multi-system recovery testing

Revision History (Table)

Version	Date	Description	Author
1.0	04/01/2026	Initial version	Shi Hao Guo

Recovery Metrics & Tiering

Maximum Tolerable Downtime (MTD)

- The maximum tolerable downtime for such systems is 4 hours, after which significant financial and operational damage is incurred.

Recovery Time Objective (RTO)

- Critical systems must be restored within 4 hours to maintain business continuity.

Recovery Point Objective (RPO)

- Data loss must not exceed 1 hour, ensuring minimal disruption to business operations.

Application Recovery Tiers Table

System	Tier	RTO	RPO
Active Directory	Tier 0	4 hours	15 minutes
Network Infrastructure	Tier 0	4 hours	15 minutes
Company Websites	Tier 1	4 hours	30 minutes
Email System	Tier 1	4 hours	30 minutes
Payroll System	Tier 2	12 hours	2 hours
Accounting System	Tier 2	12 hours	2 hours
Reporting Systems	Tier 3	24 hours	8 hours
Planning Tools	Tier 4	48 hours	24 hours
Archive Systems	Tier 5	72 hours	48 hours

Tier Explanation

- **Tier 0-1:** Critical systems required for immediate business operations
- **Tier 2-3:** Important systems supporting business processes
- **Tier 4-5:** Non-essential systems

DR Teams & Communications

Crisis Management Team (CMT)

Responsible for:

- High-level decision-making
- Resource allocation
- Coordination across departments

Damage Assessment Team

Responsible for:

- Evaluating damage to systems and facilities
- Reporting findings to leadership

IT Recovery Team

Responsible for:

- Restoring IT systems, including networks, servers, and databases

Communication Plan

Internal Communication

- Employees will be notified via:
 - Email alerts
 - SMS notifications
 - Company communication platforms (MS Teams, Zoom, Google Workspace, etc.)

External Communication

- Vendors and service providers will be contacted for support and resources

Media Communication

- A single designated spokesperson will handle all public communication
- Only verified information will be released

Activation Triggers

Declaration Authority

The IT Disaster Recovery Plan may be activated by:

- IT Director
- Chief Executive Officer (CEO)

Disaster Levels

- **Minor:** Limited disruption; operations continue
- **Intermediate:** Significant disruption affecting key systems
- **Major:** Complete system failure or facility loss

Activation Trigger Checklist

The ITDR plan will be activated if:

- Systems are unavailable for more than 2 hours
- Critical data loss is detected
- Physical facility becomes inaccessible
- Cyberattack compromises system integrity

System Restoration Procedures

Recovery Considerations

- Backup availability and integrity
- Security requirements
- Software licensing and access keys
- Network configuration details

Order Constraints

Systems must be restored in the following order:

1. Network infrastructure
2. Servers
3. Databases
4. Applications

Disaster Recovery Task List

Step	Estimated Time	Resource/Team
Initial Damage Assessment	30 minutes	Damage Assessment Team
Restore Network Infrastructure	1 hour	IT Recovery Team
Restore Servers	2 hours	IT Recovery Team
Restore Databases	2 hours	Database Team
Restore Application	1 hour	IT Team
System Testing & Validation	1 hour	Quality Assurance/Test Team

Catch-up Processing

After systems are restored:

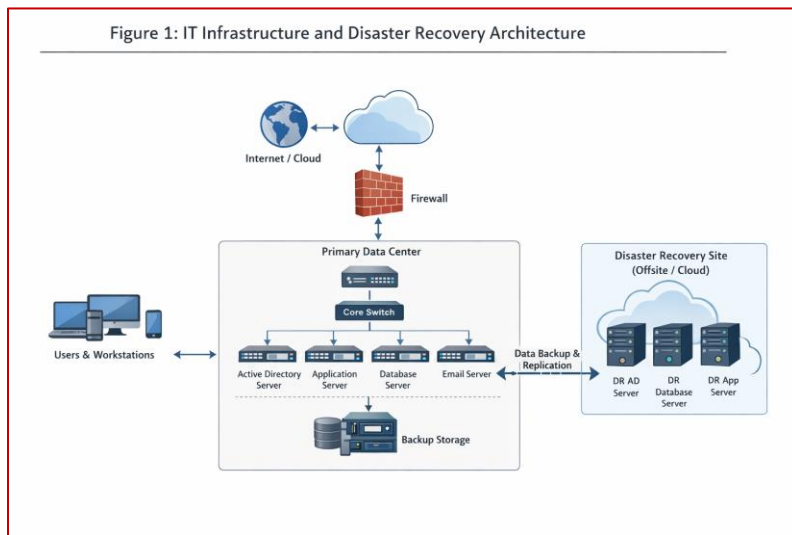

- Backlogged transactions will be processed
- Data will be verified for integrity and completeness
- Systems will be monitored for stability

Appendices & Supporting Data

Contact Information

Name	Role	Phone	Email
John Smith	IT Director	555-1234	jsmith@example.com
Jane Doe	Network Admin	555-5678	jdoe@example.com
Mike Lee	Database Admin	555-9101	mlee@example.com

Architectural Diagrams

Workarounds

During system downtime:

- Manual data entry will be used
- Paper-based processes will temporarily replace digital systems
- Employees will follow offline procedures

Vendor Contracts / SLAs

- Cloud service providers
- Backup storage vendors
- Network service providers

Event Log Template

Time	Event	Action Taken
